OneQ ON is the integrated digital brand of Hana TI,  
Where technology ,culture, and people coexist.

# C Lounge

Cloud-based smart groupware for safe and efficient organization and business management

**C Lounge** is a reliable, cloud-based business management platform that helps employees share their business knowledge and collaborate seamlessly for superior work efficiency.

## Beginning Of Collaboration

### Major Functions

#### Basic Functions

- User-focused, intuitive UX/UI
- Email, calendar, address book, and chatting services

#### Project Management

- Integrated project monitoring
- Easy schedule adjustments and project scope management

#### Electronic Approval

- Systematic decision-making and quick execution to support work tasks
- Increased work efficiency through differentiated user authorization levels

#### File Drive

- Data sharing via PC and smartphone through cloud services
- Support data sharing in anywhere makes greater work efficiency

### Benefits

#### Low-Cost Installation

No initial costs and reasonable fees charged for low-cost, cloud-based services

#### Efficient Management

Intuitive task management for easy project management

#### Increased Work Efficiency

Increased work efficiency through collaboration functions (chat, approval process, etc.)

#### High Accessibility & Safety

Safe, cloud-based storage of information for the ability to work anytime, anywhere

SOLUTION 02

# API

An open-type platform that provides internal services to external users in the form of a secure and effective API\*

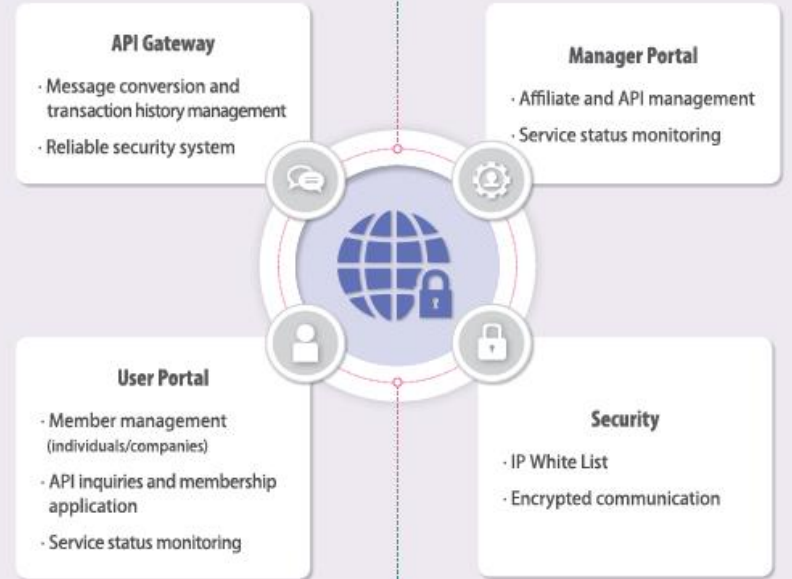

\*API: Application Programming interface

**ONE API platform** provides services from internal providers to external users in the form of an API, thereby supporting the new businesses of clients and their partner companies.

Easy To Access

## Major Functions

## Benefits

SOLUTION 03

# EAI

An open source-based interface solution for making efficient connections between various business systems

**InoCon**, a next-generation interface solution that supports real-time communication between heterogeneous systems, is quickly and easily connects complex and scattered individual systems and organizes them together in one place.

“  
Super  
Connectivity  
”

## Main Features

### Enhanced Development & Operation Convenience

- Admin Tool in a web environment that enables real-time monitoring and integrated control
- Easy registration and automatic generation of interface ID

### Enhanced System Expandability

- Various protocol supports (HTTP, HTTPS, TCP / IP, FTP, etc.)
- Support various message types (ISO 8583, Fixed length, Json)

### Increased Communication Stability

- Enhanced system stability through rule-based standard message transaction
- Automatic detection of line failures and failure recovery

### Improved System Availability

- Continuous, stable service operation (24h\*365d)
- Real-time reflection of message conversion without system restart

## Benefits

### Improve Global Competitiveness

Improve global business competitiveness and enhances high-quality client services by improving work productivity and system expandability

### Quick Launching New Business

Allow for flexible responses and rapid connections to new services in the business environment of the 4th Industrial Revolution

### Various Applications

Allow for the strategic integration of interfaces and standardization in all service fields of the 4th Industrial Revolution such as finance, banking, communication, and manufacturing, etc.

# Biometrics

A PKI\*-based user authentication security solution that uses biometric sensor and secure data storage to greatly improve authentication safety and convenience

\*PKI: Public Key Infrastructure

This innovative, customized authentication, and security solution differentiates itself from existing conventional biometric solutions and enhances security by completing authentication without additional transmitting and collecting customer biometric information.

“  
Only  
'Me'  
Allowed  
”

## Major Functions

### Proven Security & Stability

- Security and stability verified by various sources, including banks, credit card companies, and access control services
- Effectively blocks hacking routes through the use of separate user authentication protocol and remote authentication protocol
- Enhanced security by multi-factor authentication method (biometric authentication + PKI authentication + Secure Storage)

### High Degree of Flexibility & Convenience

- Supports various forms of biometric authentication (fingerprinting, iris scans, voice recognition, etc.)
- Provides customized user authentication through the Customer Policy Settings
- Ability to select biometric authentication through standardized API

## Benefits

### Enhanced Business Performance

- Attract a greater number of customers with easy payment procedures and a high level of security
- Support of various authentication terminals to attract technologically challenged customers

### Strengthening of Corporate Competitiveness

- Increased customer satisfaction and enhanced corporate image
- Provision of greater opportunities to explore various business models when combining the authentication system with various products and services

### Cost Savings

- Minimized the costs associated with security breaches by preventing various security risks
- Decreased corporate loss through the prevention of non-repudiation of user payments

SOLUTION 05

# RPA

A specialized RPA\* solution that increases work efficiency by automating repetitive and regular processes

\*RPA: Robotic Process Automation Solution

The **Work-life Bot** is a business automation solution that innovatively improves a company's business processes by using automation to simplify repetitive and routine tasks.

## Work-life Balance

### Major Functions

#### Low TCO

- Optimal operation and reduced costs through the combination of Unattended/Attended Robots
- Runtime-based, low-cost payment services using cloud
- Up to 50% lower initial system costs and operating costs than conventional services

#### High Accuracy

- High object recognition rate in any OS environment
- Versatile OCR\* Editor with high utilization (ABBYY, Tesseract)

\*OCR: Optical Character Recognition

#### Optimized Operation & Management

- Simple registration and revision of work tasks
- Support of various tools for user notifications (Mini, SNS, SMS, etc.)

\*Mini: tool for monitoring and controlling work tasks

### Benefits

#### Reduce Costs and Time

Improve employee productivity and reduces labor costs through the automation of business tasks

#### Advance Automation Technology

Enable the high-level automation of cognitive judgment and decision-making tasks through the combination of various systems and AI technologies

#### Stable operation

Non-stop stable operation (24h\*365d)  
Reduce human error

## CORE

Open-source total banking/  
multi-finance solution for  
smart banking services

**InoAn** (Inovasi KeuangAn) is a banking and multi-finance solution that improves customer service quality and expands sales capabilities by increasing system processing speed and facilitating the easy development of financial products.

## Innovation Finance

### Main Features

#### Customized to the Business Environment

- Creation of an exceptional environment for the expansion of non-face-to-face channels
- Establishment of best practices through the study of exemplary cases
- Application of best practices, developed out of a wealth of research and experiences

#### Flexibility

- High degree of scalability based on business area and trends in the banking and multi-finance field
- Excellent stability and easy maintenance

#### Technology-Based

- USD 52 million spent exclusively on R&D in the last 12 years
- An open source-based solution with minimal dependency on specific commercial solutions

### Benefits

#### Improved System Processing Speed

Fast, efficient operation through the Product Factory and Fee Factory functions

#### Improved Convenience

Enhanced customer and teller convenience through automated functions and personalized customer support

#### Increased Sales Performance

Strengthened business expansion through vast of global business expertise and key support for the fast development of financial products

#### Cost Reduction

An open source-based system with minimal dependency on specific commercial solutions, resulting in increased cost savings

# No matter what you need, "next TI" is here for you

Date of establishment: February 2017  
An affiliate of the Hana Financial Group (Korea)

## Our Values

- 📌 **Knowledge of the Financial Industry**
  - Possession of proven know-how and technology in all sectors of the financial industry
  - Banks, multi-finance, securities, credit cards, insurance, etc.
